If you have clicked on this link it means that you are potentially interested in this project.
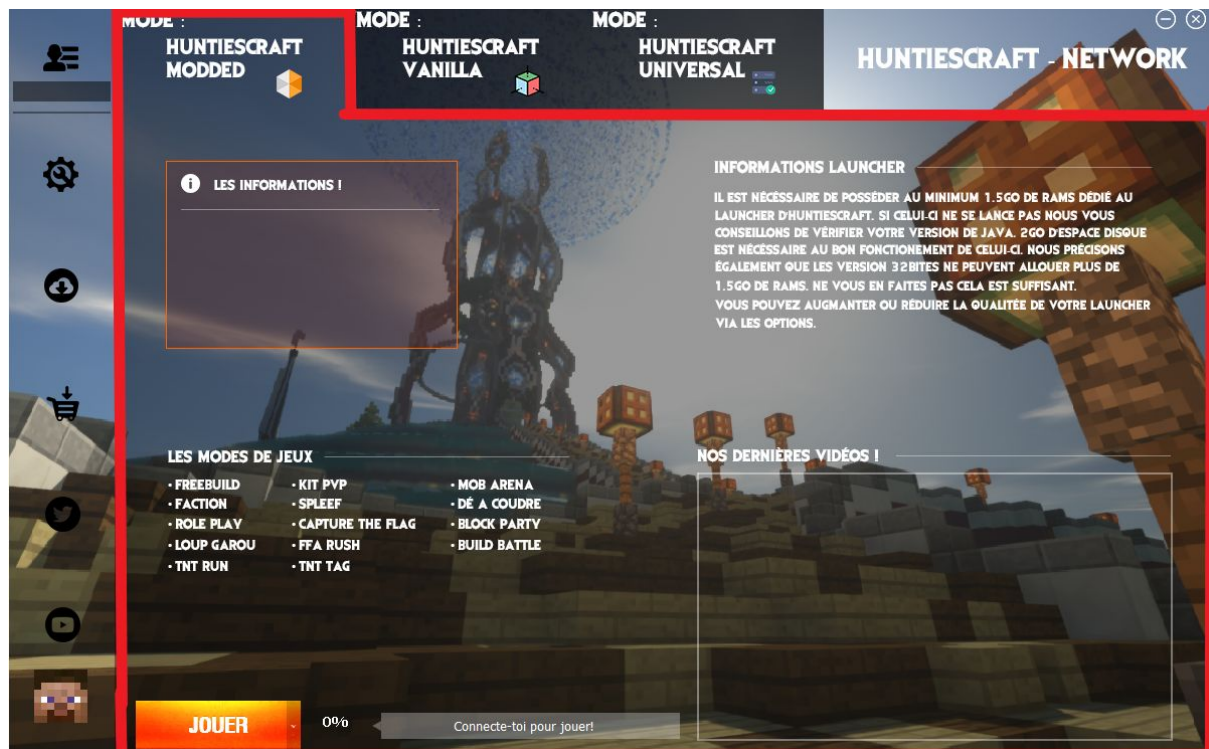

I'm going to draw up here the specifications of this launcher. Obviously as said previously it is a small project that has no remuneration I do not ask for anything very complex. If you are a beginner in Java programming I put below a link that leads to a rather that I find very interesting (the tutorial is in French):https://www.youtube.com/playlist?list=PL6dwjxET9wt_6kTZyLmjzd0BnNfkJVS1q
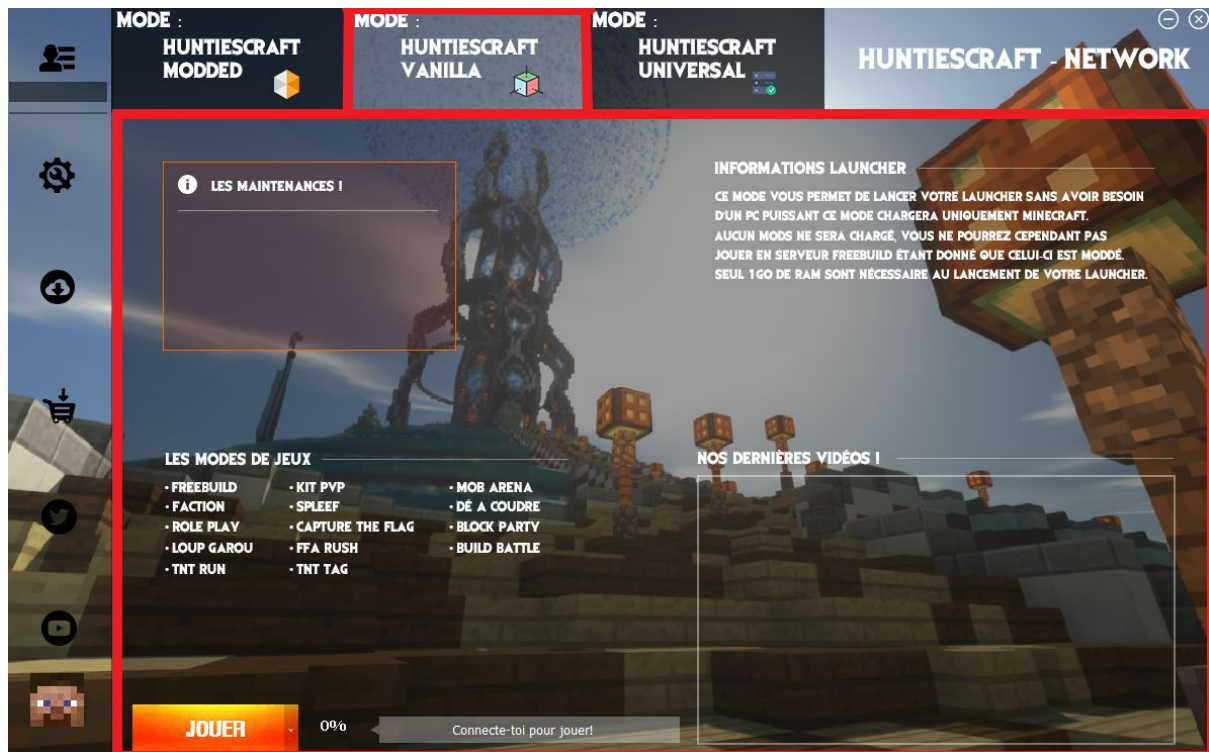

a

Se Launcher will have three main screens,

the first one being the most important will be the one where will be displayed all the information and a video of presentation I will try to put you a screen of this first page.

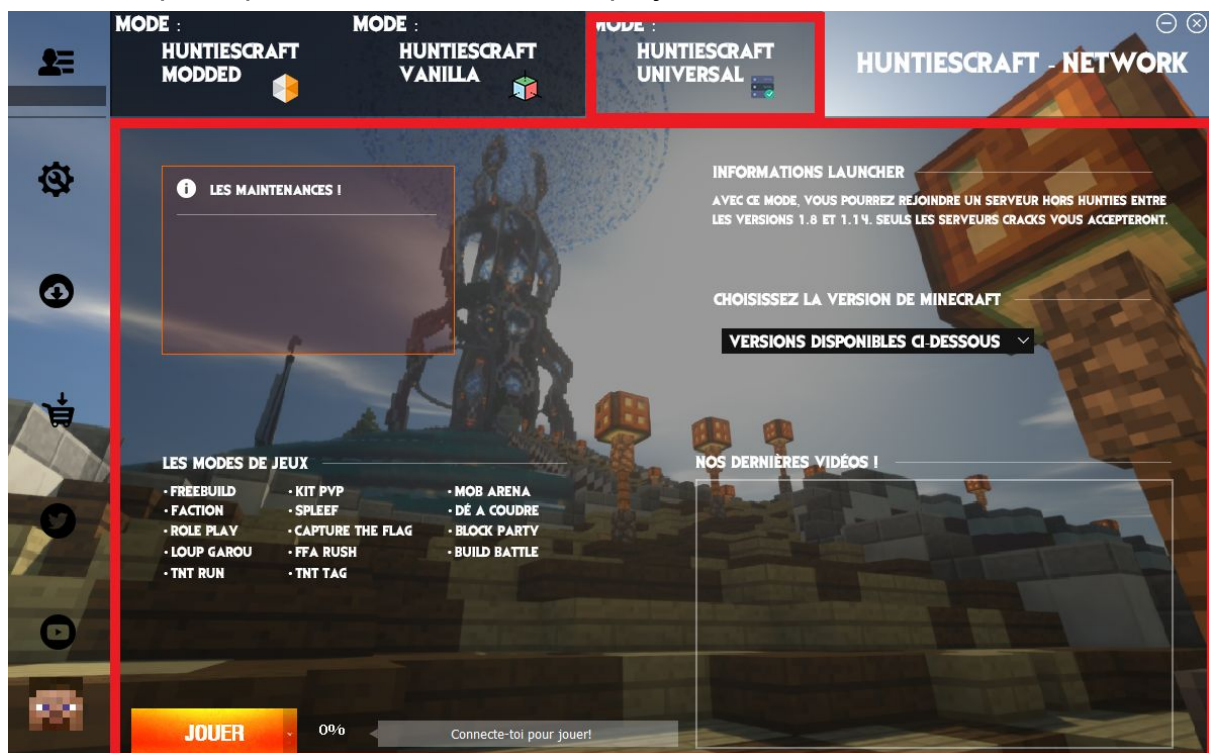

What you need to tell yourself and where these images are coming from. Indeed a friend gave them to me from his old project but I can't use them directly because it's not compatible with my Minecraft server project.

On the second page just a clickable page with different information about the game here it will be more another graphic designer to do this work.
 Of course I am putting pictures but you should not be interested in the information of the pictures but rather in the form of the picture.

 So don't pay attention to what is written and what is marked. The last button is attributed to the credit so it will be marked with the nickname or first name of all those who participated in the chicken craft project.

 As you can see on the left several buttons are placed there, the most important is the first one at the top where there are three ways to connect.

-the first one's with Mojang,

-the second is with the CMS main web

-the last one and with a cracker account you just have to put a nickname

. The second important button and the second at the top which is the options button

if you manage to try to reproduce as faithfully as possible the options which are marked it will be very interesting nevertheless if you do not manage to put all the information it is not serious.

the following buttons are simple buttons that lead to links as you can see the third one is a download button from the hours and resources pack if you don't know how to do this it's absolutely okay to remove it as it's not very useful.

the following buttons are simply buttons that lead to websites or YouTube channels to the website shop there I think nothing very complicated.
In the bottom left corner you will see a head of a player skin.
Here too if you don't know how to get to this result remove the ine of any use.
As I said what I want to get out of this launcher is the shape so I'm not really interested in the mechanics.

If you like to search the code, my friend obviously gave me the source code of this launcher so I can give it to you so you can study it.

Finally you can see a background that changes with each new connection if you don't know how to do that tell me and we will choose one of them so it's not very important.

Finally I would like to clarify that I am not a monster I know I am asking for free services so I am not asking for a constant or extraordinary level of follow-up. on the other hand I am looking for a complicity and a situation that suits you if one day you are not available during the development of the project tell me I would understand.

If you can't keep these specifications but you are still interested in the project tell me and we'll repeat this launcher together. note for those who would have suspicions about the truth of my words when I talk about the launcher that I was given I give you here the evidence in:
